

Wu Kingdom Helv Relic Museum

Wuxi, China

ACCIONA Producciones y Diseño has designed the spectacular audiovisual that is located on the ground floor of the museum and forms the culminating moment of the exhibition itinerary. It has the largest immersive and interactive screen in the world up to date (650 m²) that, together with the 400 m² interactive floor and the 250 m² projection screen, takes the visitor on a journey along the five chapters.

Lake Tahi, the king's palace, the battle field, the city's founders and Wu's landscape make up the settings where the visitors can feel and interact with the spectacular scenes in the history of the Kingdom of Wu.

The multi-media installation has capacity for 3,840 visitors a day. APD's experience in flow management has been the key to the efficiency of the design.
